

## ABSTRACT

A polylactic acid formed article and a production process therefor. A resin composition for the formed article comprises polylactic acid having an optical purity of not lower than 90% and a residual lactide amount of 0.1 to 0.6% by mass, and 1 to 25% by mass of a crystal nucleus agent. The formed article is characterized in that a difference ( $|\Delta H_m| - |\Delta H_c|$ ) between the absolute value of a crystal fusion heat amount  $\Delta H_m$  as measured at a heat-up rate of 20°C/min by means of a differential scanning calorimeter and the absolute value of a heat-up crystallization heat amount  $\Delta H_c$  generated by heat-up crystallization is not lower than 25J/g, and has a crystallinity of not lower than 35% as determined by X-ray measurement and a crystallization speed of not lower than 0.05 min<sup>-1</sup> at 130°C.
